CONTENTS

	Page
CHAPTER 1 INTRODUCTION	
1.1 Motivation	1
1.2 Background	2
1.2.1 Thermal management of electronic devices	2
1.2.2 Polymers	7
1.2.3 Ceramics	8
1.2.4 Carbon	10
1.3 Literature review	12
1.3.1 High thermal conductivity and electrical insulation polymer composites	12
1.3.2 High thermal conductivity and electrical conductive polymer composites	15
1.3.3 Enhanced thermal conductivity of polymer composites with hybrid filler systems	18
1.3.4 Influences of surface modification of filler enhanced properties of polymer composites	20
1.3.5 The conclusion of literature review	22
1.4 Thesis objective	23
CHAPTER 2 EXPERIMENTAL METHOD	
2.1 Materials	25
2.2 Preparation of surface modification of filler	25
2.3 Preparation of polymer composites	28
2.3.1 Batch kneader	28
2.3.2 Twin screw extruder	28
2.4 Testing	29

	Page
2.4.1 Thermal conductivity measurement	29
2.4.2 Mechanical properties	30
2.4.3 Thermal analysis	31
2.4.4 Dynamic mechanical analysis	32
2.4.5 Electrical properties	32
2.4.6 Characterization and properties of PP composites	33
2.4.6.1 Fourier transform infrared spectroscopy (FTIR)	33
2.4.6.2 Morphological observation	33
2.4.6.3 X-ray diffraction analysis (XRD)	34
2.5 Conclusion	34
CHAPTER 3 PREPARATION AND PROPERTIES OF HIGH THERMAL CONDUCTIVITY POLYPROPYLENE COMPOSITES	
3.1 Introduction	36
PART I	40
3.2 Thermal and mechanical properties of polypropylene composites containing a single size of boron nitride particles.	
3.2.1 Experimental	40
3.2.1.1 Materials	40
3.2.1.2 Preparation	41
3.2.1.3 Testing	42
3.2.2 Result and discussion	44
3.2.2.1 Thermal conductivity of composites containing BN particles of a single size	44
3.2.2.2 The morphologies of PP composites containing BN particles of a single size	45
3.2.2.3 Dynamic mechanical analysis of composites containing BN particles of a single size	51

	Page
3.2.2.4 Thermal analysis of composites containing BN particles of a single size	54
3.2.2.5 X-ray diffraction of composites containing BN particles of a single size	59
3.2.2.6 Prediction of thermal conductivity of the composites by using calculation model	61
PART II	64
3.3 Thermal conductivity and mechanical properties of polypropylene composites containing the combination of different-sized boron nitride particles.	
3.3.1 Experimental	64
3.3.1.1 Materials	64
3.3.1.2 Preparation	65
3.3.1.3 Testing	66
3.3.2 Result and discussion	66
3.3.2.1 Thermal conductivity of PP composites with combinations of BN particles of different sizes	66
3.3.2.2 The morphologies of PP composites with combinations of BN particles of different sizes	70
3.3.2.3 Dynamic mechanical analysis of PP composites with combinations of BN particles of different sizes	72
PART III	76
3.4 Thermal conductivity of polypropylene composites containing hybrid filler systems of boron nitride particles and vapor-grown carbon fiber	
3.4.1 Experimental	76
3.4.1.1 Materials	76
3.4.1.2 Preparation	78
3.4.1.3 Testing	78

	Page
3.4.2 Result and discussion	79
3.4.2.1 Thermal conductivity of PP/BN and PP/VGCF composites	79
3.4.2.2 The morphologies of PP/VGCF composites	81
3.4.2.3 Thermal conductivity of PP composites with hybrid filler of BN/VGCF	83
3.4.2.4 Surface resistivity of PP composites with hybrid BN/VGCF	85
3.4.2.5 The morphologies of PP composites with hybrid BN/VGCF	86
3.5 Conclusion	91
CHAPTER 4 EFFECT OF SURFACE MODIFICATION WITH TITANATE COUPLING AGENT ON PROPERTY OF POLYPROPYLENE COMPOSITES	
4.1 Introduction	95
PART I	98
4.2 Effect of surface modification on the properties of polypropylene/ vapor-grown carbon fiber composites	
4.2.1 Experimental	98
4.2.1.1 Materials	98
4.2.1.2 Surface modification with titanate coupling agent on VGCF surface	99
4.2.1.3 Preparation	99
4.2.1.4 Testing	100
4.2.2 Result and discussion	102
4.2.2.1 FTIR analysis of untreated and treated short- length VGCF	102

	Page
4.2.2.2 Thermal conductivity of PP composites with untreated and treated short-length VGCF	103
4.2.2.3 Surface resistivity of PP composites containing untreated and treated short-length VGCF	104
4.2.2.4 Morphologies of PP composites with untreated and treated short-length VGCF	105
4.2.2.5 Mechanical properties of PP composites containing untreated and treated short-length VGCF	109
4.2.2.6 Dynamic mechanical analysis of PP composites with untreated and treated short-length VGCF	113
4.2.2.7 X-Ray Diffraction of PP composites containing untreated and treated short-length VGCF	116
PART II	118
4.3 Effect of surface modification on improving electrical and mechanical properties of PP/VGCF composites	
4.3.1 Experimental	119
4.3.1.1 Materials	119
4.3.1.2 Surface modification with titanate coupling agent on VGCF surface	119
4.3.1.3 Preparation	119
4.3.1.4 Testing	119
4.3.2 Result and discussion	120
4.3.2.1 Thermogravimetric analysis of PP composites with untreated and treated long-length VGCF	120
4.3.2.2 Surface resistivity of PP composites with untreated and treated long-length VGCF	122
4.3.2.3 Dynamic mechanical analysis of PP composites with untreated and treated long-length VGCF	123

	Page
4.3.2.4 Morphologies of PP composites with untreated and treated long-length VGCF	124
PART III	127
4.4 Effect of surface modification on increasing dispersibility of small size of BN particles in PP/BN composites.	
4.4.1 Experimental	127
4.4.1.1 Materials	127
4.4.1.2 Surface modification with titanate coupling agent on BN surface	127
4.4.1.3 Preparation	128
4.4.1.4 Testing	128
4.4.2 Result and discussion	129
4.4.2.1 Thermal conductivity of PP composites with untreated and treated small-sized BN particles	129
4.4.2.2 Morphologies of PP composites with untreated and treated small-sized BN particles	131
4.5 Conclusion	132
 CHAPTER 5 CONCLUSION	
5.1 Conclusion	134
5.1.1 The effect of high thermal conductivity filler on properties of polymer composites	134
5.1.2 The effect of surface modification with titanate coupling agent on the dispersibility of filler in polymer matrix and properties of polymer composites	137
5.2 Future works	139
